

Dedicated Wireless Connectivity Proposal

Prepared for: [Client Name], [Business Name] **Date:** [Date] **Prepared by:** Gerhard Smit, CTTX Services (Pty) Ltd

1. The Challenge

[Business Name] requires reliable, carrier-grade connectivity at [Location] to support [Pain Point: e.g., guest WiFi, POS systems, security cameras]. Current best-effort LTE solutions are contended (shared with other users), resulting in dropped connections during peak times and poor guest experiences.

2. The CTTX Solution

We propose a dedicated, uncontended wireless link powered by the Vodacom Business network. Unlike standard LTE, this is a dedicated backhaul solution ensuring consistent speeds, high uptime, and zero sharing with residential users.

Key Benefits

- **Uncontended Bandwidth:** You get what you pay for, $\frac{24}{7}$.
- **No Trenching Required:** Rapid deployment without waiting for fibre infrastructure.
- **Carrier-Grade Reliability:** Built on Vodacom's enterprise core network.
- **Managed Service:** Proactive monitoring and support from CTTX.

3. Investment Options

All pricing excludes VAT. 24-month term applies.

Service Tier	Speed (Up/Down)	Monthly Fee	Best For
Standard	20 Mbps / 20 Mbps	R 1,600	Basic POS, small guest house, essential admin
Business	50 Mbps / 50 Mbps	R 2,800	Medium lodge, multiple POS, 10-20 concurrent users
Enterprise	100 Mbps / 100 Mbps	R 4,500	Large reserve, CCTV backhaul, 50+ concurrent users

Note: A once-off site survey fee of R 3,500 applies. This fee is fully credited against your first month's billing upon contract signature.

4. Next Steps

1. **Approve Survey:** Reply to this email confirming your preferred Service Tier.
2. **Site Survey:** CTTX will conduct a physical line-of-sight and RF noise assessment at your premises.
3. **Deployment:** Upon successful survey, equipment is installed within 10-14 business days.
