

PRIVATE INFRASTRUCTURE NETWORK ASSESSMENT

Botlierskop: the network on the reserve

With villas, tented camps, horse and game activities spread across the reserve, guests expect to be connected everywhere and staff need to reach each other across the property. When each area has its own link, you pay for several connections and still have gaps. One owned, monitored backbone covers the lot, including the solar and power systems behind it.

HALF A DAY ON SITE, WITH YOU

- We walk the villas, tented camps, activity areas, gates and the high ground.
- What you have today: links, routers, contracts and the systems that depend on them.
- What fails, where and how often, from the people who deal with it.
- What it costs you, taken from your own invoices.
- Where a backbone can run and how a reliable uplink gets onto it: terrain, line of sight, high sites and power.

WHAT YOU GET

- A written report on the reserve: today's network, the gaps and the systems at risk.
- An owned network design: backbone, distribution and access, with standby paths.
- Feasibility, checked against the terrain before anyone prices a build.
- Indicative investment and payback, calculated from your own numbers.
- The report is yours to keep, whatever you decide.

Cost of Disconnection vs Value of Connected Operations

	COST OF DISCONNECTION	VALUE OF CONNECTED OPERATIONS
Avoided loss	Gaps in coverage sit exactly where incidents happen: fences, gates and the far side of the reserve.	Cameras, gates and alarms report in, after hours as well.
Operational efficiency	Staff drive to find each other, and every fault needs a vehicle and a person.	Rangers, guides and maintenance teams reachable across the property.
Infrastructure ownership	Rented links per lodge, paid for month after month, still with gaps.	A reserve-owned backbone that carries guests, staff and security on one network.
Executive risk reduction	An incident after hours with no effective way to coordinate.	Dependable communications across the areas where an incident can happen.

Reference. At Sandymount Safaris (30,000+ ha, three lodges) an owned backbone took daily provider callouts to zero and carries over 800 Mbps across the reserve.

 ex VAT

Half-day on-site assessment, credited in full against the build.

NEXT STEPS

- 1 A 10-minute call to agree what matters most on the reserve.
- 2 We book the half day at a time that suits your team.
- 3 You receive the report, then decide whether to build. No obligation beyond the assessment.
