

PRIVATE INFRASTRUCTURE NETWORK ASSESSMENT

Afrimat Eastern Cape: the network on site

On a quarry the network carries the weighbridge, CCTV, access control and plant telemetry, and it usually grows as a patchwork, site by site. Across several Eastern Cape operations, one owned and monitored network gives you the same visibility everywhere and one number to call when something drops.

HALF A DAY ON SITE, WITH YOU

- We walk one representative quarry: the weighbridge, plant, offices, gates and camera positions, and how it links to your other Eastern Cape sites.
- What you have today: links, routers, contracts and the systems that depend on them.
- What fails, where and how often, from the people who deal with it.
- What it costs you, taken from your own invoices.
- Where a backbone can run and how a reliable uplink gets onto it: terrain, line of sight, high sites and power.

WHAT YOU GET

- A written report on the site: today's network, the gaps and the systems at risk.
- An owned network design: backbone, distribution and access, with standby paths.
- Feasibility, checked against the terrain before anyone prices a build.
- Indicative investment and payback, calculated from your own numbers.
- The report is yours to keep, whatever you decide.

Cost of Disconnection vs Value of Connected Operations

	COST OF DISCONNECTION	VALUE OF CONNECTED OPERATIONS
Avoided loss	A weighbridge or camera offline is product, fuel or cable leaving without a record.	Weighbridge, CCTV and access control stay up, with a standby path when the main link fails.
Operational efficiency	Faults are found by driving out, and trucks queue while the weighbridge is down.	Engineering sees plant telemetry from anywhere on site.
Infrastructure ownership	A patchwork of links that grew site by site, each with its own supplier.	One owned, monitored network with one number to call when something drops.
Executive risk reduction	Incidents on site with no reliable way to reach people or evidence what happened.	Dependable communications for safety, incident response and audit.

R3,500 ex VAT

Half-day on-site assessment, credited in full against the build.

NEXT STEPS

- 1 A 10-minute call to agree what matters most on the site.
- 2 We book the half day at a time that suits your team.
- 3 You receive the report, then decide whether to build. No obligation beyond the assessment.
