

PRIVATE INFRASTRUCTURE NETWORK ASSESSMENT

Enel: construction-phase site connectivity

During construction a wind site needs connectivity long before the permanent fibre exists: site offices, cameras, access control and the teams on the ground. CTTX deploys rapid, temporary site networks for the construction phase and hands over to the permanent design, so the operating site isn't starting from nothing.

HALF A DAY ON SITE, WITH YOU

- We walk the construction camp and site offices, laydown areas, gates, camera positions and the planned turbine strings.
- What you have today: links, routers, contracts and the systems that depend on them.
- What fails, where and how often, from the people who deal with it.
- What it costs you, taken from your own invoices.
- Where a backbone can run and how a reliable uplink gets onto it: terrain, line of sight, high sites and power.

WHAT YOU GET

- A written report on the site: today's network, the gaps and the systems at risk.
- An owned network design: backbone, distribution and access, with standby paths.
- Feasibility, checked against the terrain before anyone prices a build.
- Indicative investment and payback, calculated from your own numbers.
- A construction-phase network plan that hands over to the permanent operating design.
- The report is yours to keep, whatever you decide.

Cost of Disconnection vs Value of Connected Operations

	COST OF DISCONNECTION	VALUE OF CONNECTED OPERATIONS
Avoided loss	Laydown areas and gates without cameras or access control during construction.	Cameras and access control live from the first weeks on site.
Operational efficiency	Crews lose time where cellular coverage is patchy.	Turbine data and reporting available across the site.
Infrastructure ownership	A single path with no owned fallback.	An owned, monitored standby network under your control.
Executive risk reduction	Lost visibility becomes an availability and reporting problem.	Evidence of resilience for the asset owner and the grid.

R3,500 ex VAT

Half-day on-site assessment, credited in full against the build.

NEXT STEPS

- 1 A 10-minute call to agree what matters most on the site.
- 2 We book the half day at a time that suits your team.
- 3 You receive the report, then decide whether to build. No obligation beyond the assessment.
