

## PRIVATE INFRASTRUCTURE NETWORK ASSESSMENT

# MTO South: the network across the plantations

Across plantations and mills the network carries fire-detection cameras, crew safety in the compartments, and the mills themselves. In fire season, a camera or radio link that drops is a real risk. An owned, monitored network across the plantations puts coverage where the crews and the fire risk are.

## HALF A DAY ON SITE, WITH YOU

- We walk the mills, fire lookout and camera positions, compartments where crews work, and the high ground.
- What you have today: links, routers, contracts and the systems that depend on them.
- What fails, where and how often, from the people who deal with it.
- What it costs you, taken from your own invoices.
- Where a backbone can run and how a reliable uplink gets onto it: terrain, line of sight, high sites and power.

## WHAT YOU GET

- A written report on the plantations: today's network, the gaps and the systems at risk.
- An owned network design: backbone, distribution and access, with standby paths.
- Feasibility, checked against the terrain before anyone prices a build.
- Indicative investment and payback, calculated from your own numbers.
- The report is yours to keep, whatever you decide.

## Cost of Disconnection vs Value of Connected Operations

|                          | COST OF DISCONNECTION                                                            | VALUE OF CONNECTED OPERATIONS                                         |
|--------------------------|----------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| Avoided loss             | In fire season, a camera or radio link that drops is a fire nobody sees in time. | Fire-detection cameras that stay connected.                           |
| Operational efficiency   | Supervisors drive to check on crews and sites.                                   | Crews, mills and cameras reachable across the plantations.            |
| Infrastructure ownership | Coverage depends on whatever cellular signal reaches the compartment.            | An owned network with coverage where the crews and the fire risk are. |
| Executive risk reduction | A crew in trouble that cannot call out.                                          | Dependable communications for crew safety and incident response.      |

**R3,500** ex VAT

Half-day on-site assessment, credited in full against the build.

## NEXT STEPS

- 1 A 10-minute call to agree what matters most on the plantations.
- 2 We book the half day at a time that suits your team.
- 3 You receive the report, then decide whether to build. No obligation beyond the assessment.
