

PRIVATE INFRASTRUCTURE NETWORK ASSESSMENT

Suzlon O&M: connectivity for crews on site

For O&M crews the network is a working tool: reaching turbine data in the field, reporting from the nacelle, and staying reachable across the site. When the only option is patchy cellular, crews lose time and safety margin. CTTX builds owned site networks for exactly that, with a standby path for SCADA when the fibre fails.

HALF A DAY ON SITE, WITH YOU

- We walk the substation and control room, turbine strings, O&M buildings, perimeter cameras and existing fibre routes.
- What you have today: links, routers, contracts and the systems that depend on them.
- What fails, where and how often, from the people who deal with it.
- What it costs you, taken from your own invoices.
- Where a backbone can run and how a reliable uplink gets onto it: terrain, line of sight, high sites and power.

WHAT YOU GET

- A written report on the site: today's network, the gaps and the systems at risk.
- An owned network design: backbone, distribution and access, with standby paths.
- Feasibility, checked against the terrain before anyone prices a build.
- Indicative investment and payback, calculated from your own numbers.
- The report is yours to keep, whatever you decide.

Cost of Disconnection vs Value of Connected Operations

	COST OF DISCONNECTION	VALUE OF CONNECTED OPERATIONS
Avoided loss	When the fibre is cut or stolen, SCADA and the perimeter cameras go dark together.	A standby wireless path that takes over automatically.
Operational efficiency	Crews lose time where cellular coverage is patchy.	Turbine data and reporting available across the site.
Infrastructure ownership	A single path with no owned fallback.	An owned, monitored standby network under your control.
Executive risk reduction	Lost visibility becomes an availability and reporting problem.	Evidence of resilience for the asset owner and the grid.

R3,500 ex VAT

Half-day on-site assessment, credited in full against the build.

NEXT STEPS

- 1 A 10-minute call to agree what matters most on the site.
- 2 We book the half day at a time that suits your team.
- 3 You receive the report, then decide whether to build. No obligation beyond the assessment.
